

Ananya Vijay

Bhubaneswar, Odisha | Email | +(91) 9334495718 | Leetcode | LinkedIn | GitHub

Profile

Detail-oriented B.Tech student in Electronics and Computer Science Engineering with a strong foundation in software development. Experience working with the MERN stack, Data Structures and Algorithms (DSA), and building secure RESTful APIs with deployment on AWS. Currently exploring Generative AI concepts, including developing conversational applications using frameworks like LangChain, with an interest in applying AI to real-world problems. Focused on continuous learning, clean coding practices, and effective collaboration.

Education

Kalinga Institute of Industrial Technology, B.Tech in Electronics and Computer Science and Engineering July 2023 - August 2027

- CGPA: 8.04

Sarala Birla Public School, Class 12 (A.I.S.S.C.E)

- Percentage: 83.5

Skills

Programming Language: C++, Java, JavaScript

Core: OOP, REST API, SDLC

Databases: SQL, MongoDB

Web Development: HTML, CSS3, ReactJs, Tailwind CSS, NodeJs, ExpressJs

Tools: Git, Postman, AWS

Projects

ReaderHub – MERN Stack Book Store: Github Repository

- Developed a full-stack MERN book store application enabling users to browse and read books through a responsive and interactive React.js interface. Built RESTful APIs using Node.js and Express.js with MongoDB integration to manage users, books, and authors, and ensured secure frontend–backend communication. Implemented JWT authentication, protected routes, and password hashing using bcrypt for enhanced security.
- Tech Stack: Tailwind CSS, React.js, Node.js, Express.js, MongoDB, Axios, Cloudinary

Contact Management REST API: Github Repository

- Developed a production-ready Contact Manager backend with secure user authentication and role-based access control, implementing RESTful CRUD APIs with JWT-based security and centralized error handling. Deployed the application on AWS EC2 using PM2 for process management and auto-restart, and tested and documented APIs using Postman.
- Tech Stack: Node.js, Express.js, MongoDB, Mongoose, JWT, Postman, AWS EC2, PM2

MoodBot: Github Repository

- Developed a conversational chatbot using LangChain and LLM APIs, implementing prompt-based response modes and maintaining context through message history for continuous interaction. Integrated API-based responses to simulate real-world conversational AI use cases.
- Tech Stack: Python (learning), LangChain, OpenAI API

Certifications

AWS Skill Builder: AWS Cloud Practitioner Essentials Certificate [Certificate Link]

Deep Learningr: Scaler: Deep Learning Course [Certificate Link]
